kill weeds with  
superheated vegetable oil

Immediately after  
treatment

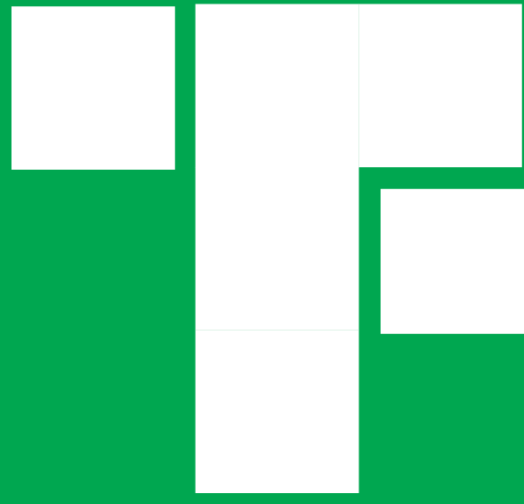

5 days later

Herbicide-free

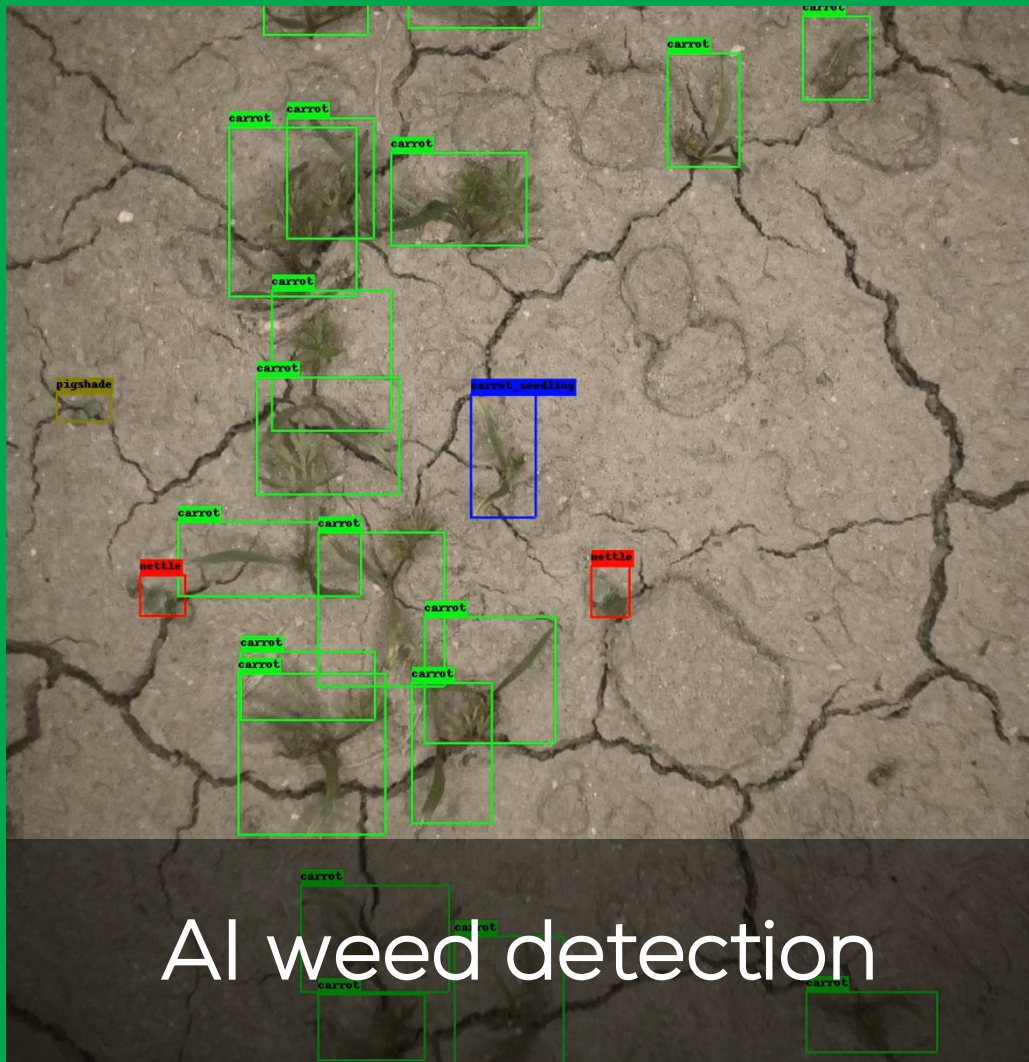

Zero soil disturbance

Thermal micro-jetting targets and kills weeds on contact

Expect 40% savings vs. hand-weeding with zero up-front capital

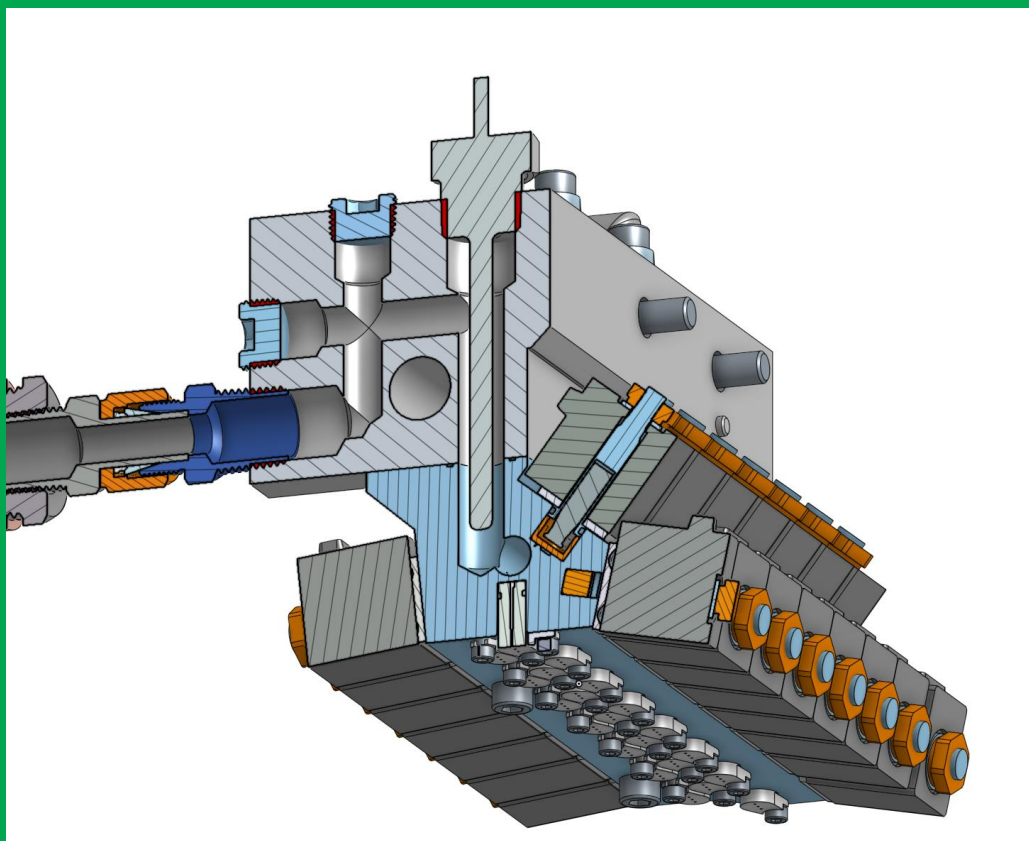

tensorfield  
agriculture

AI weed detection

Tensorfield weeding services replace hand-weeding and thinning crews in specialty crops, with one machine covering one acre per hour.

Patent-pending heated sprayer

Patent-pending thermal sprayers apply superheated food-safe vegetable oil precisely onto weeds with practically 100% lethality from in-field testing.

Thermal micro-jetting is effective even when weeds grow beyond the cotyledon stage.

### Benefits:

- Organic friendly
- No soil disturbance
- 1/4 inch spray resolution

Based on research from UC Davis and the University of Bonn
